min. 3808 mm

Battery capacity:
max. 48 V/ 715 Ah

Drive motor rating:
15 kW

Wet, uneven floors and restricted working environments are no problem for the new EPXi electric forklift, making it the perfect alternative to an IC Forklift.

The new EPXi series CLARK forklift is a quiet non-polluting operation alternative to internal combustion engine trucks. The robust electric counterbalanced EPXi is suitable for most applications with handling capacities from 2.0 to 3.2 tonnes.

A solid 'Built to Last' construction with a well designed driver compartment makes the CLARK EPXi series the truck you need to operate in a smart and safe manner over long periods.

The new CLARK EPXi is available now with long term rental rates similar to an equivalent IC truck!
